

Starjump gives a handle to learning to not only the children they work with but also the parents! My son, Sia Jin Sing (9), has been on the Starjump programme since its trial run here in Malaysia in 2008. It has made a remarkable difference to our lives-- both Jin Sing and I are now able to understand his learning style better and that has taken a lot of pain out of schooling as well as from our parent-child dynamics. Joyce works with Jin Sing to help him acquire and develop skills that augment his visual-spatial abilities; then she works with me and Jin Sing's principal/teacher to continuously provide a conducive environment not only in the school but also at home as well as in his social interaction with others. Starjump does not teach a coping mechanism; rather, it helps parents and visual-spatial learners to appreciate the wonderful gift that these children have and in doing so, unlock the door to a lifetime of learning. Now, isn't that exciting!
