

Brian was diagnosed with ADHD and weak in sensory integration since he was 7 years old. He had poor copying skills, low self esteem, was easily frustrated, difficulty controlling his emotions control and was easily distracted. After attending star jump program (since January 2009), we could see improvements in him. Although it's not yet 100%, it is much better than before. His motor skills have developed. He is more confident and his self esteem has improved. As parents, we are also educated by Joyce in learning how to handle Brian and how to help him improve. Thank You.
