

Starjump is a wonderful programme through which we could really identify the areas of learning difficulty for my son. Before joining Starjump, Primit had a short attention span, difficulty to focus in a task, poor auditory memory and poor comprehension. Since he started the programme at the end of November 2009, his visual memory and attentiveness have improved a lot. He really looks forward to the sentence making activity as suddenly the writing in black and white has taken a new meaning for him. Starjump has really helped to improve his expressive language and comprehension. He is a lot more aware of his surroundings and can hold an animated conversation, recalling past events. I sincerely thank Joyce for the valuable inputs and techniques that she has shared which empowered Primit to exploit his potential.
